RENEWABLE ENERGY RESOURCE STANDARD

(a) No energy service provider (“ESP”) may sell or otherwise provide or offer to sell or provide Generation Service to customers under the Retail Open Access Tariff (“R-OAT”) without ownership of sufficient renewable energy resource entitlements as may be required by the Vermont Public Service Board (the “Board” or “PSB”).

(b) The PSB may prescribe, and may from time to time amend, a standard for renewable energy resources for ESPs participating in the R-OAT, as well as requirements for implementation of that standard and compliance with that standard.

(c) Renewable energy facilities may be defined by the Board under a tradeable renewable energy standard. Facilities that qualify for tradeable renewable energy credits may be sustainable, environmentally sound facilities as determined by the Board.
